

Ideation Phase

Empathize & Discover

Date	01-10-2026
Team ID	SWTID-2026-2467
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple visual tool that helps a team understand the user's behaviour, expectations, concerns and overall experience.

By looking at the problem from the user's point of view, the team can identify practical needs and design a solution that is easier and more effective to use.

Project Empathy Map:

SAYS	THINKS
• "I want my issue to be directed to the right support team without delay." • "I should be able to track what is happening with my ticket." • "I don't want to explain the same problem again and again."	• "Will the system understand my issue correctly?" • "Can automation make ticket handling faster?" • "What happens if my ticket is assigned to the wrong category?"
DOES	FEELS
• Raises support tickets with relevant issue details. • Checks the progress and status of submitted tickets. • Follows up when a ticket is delayed, misrouted or unresolved.	• Frustrated when tickets are incorrectly categorized. • Concerned when important issues take too long to reach the right team. • Relieved when automation provides quick and accurate ticket routing.
