

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	01/10/2026
Team ID	SWTID-2026-2467
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Ticket Creation	Create incident / service request; capture required ticket details
FR-2	Automatic Classification	Classify ticket using configured Flow Designer conditions and rules
FR-3	Automatic Assignment	Set the appropriate assignment group and route the ticket automatically
FR-4	Ticket Update & Notification	Update classification/status fields and provide relevant ticket status information
FR-5	Exception Handling	Allow unmatched or exceptional tickets to remain available for manual review
FR-6	Rule Administration	Maintain classification conditions and assignment mappings as requirements change

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The ticket classification and routing workflow should be simple and understandable for Service Desk agents and requesters.
NFR-2	Security	Access to tickets, classification data, and administrative configuration should follow ServiceNow roles and access controls.
NFR-3	Reliability	The Flow should execute consistently for configured ticket creation/update conditions, with exceptions available for manual handling.
NFR-4	Performance	Automated classification and assignment should occur efficiently so routine tickets can be routed without unnecessary manual delay.
NFR-5	Availability	The automation should operate whenever the configured ServiceNow ticketing workflow is available.
NFR-6	Scalability	The solution should support additional ticket categories, rules, assignment groups, and increasing ticket volumes as requirements grow.
