

Project Design Phase

Problem – Solution Fit

Date	01/10/2026
Team ID	SWTID-2026-2467
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Problem – Solution Fit :

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer’s problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ **Understand the existing situation in order to improve it for your target group.**

Problem-Solution fit canvas 2.0 Purpose / Vision: Auto Ticket Classification using Flow Designer

1. CUSTOMER SEGMENT(S) CS ServiceNow end users who raise incidents or service requests; Service Desk / IT support agents who receive and process those tickets.	6. CUSTOMER CONSTRAINTS CC High ticket volume, limited agent time, inconsistent manual categorization, wrong-team assignment risk, and dependence on manual updates.	5. AVAILABLE SOLUTIONS AS Manual ticket classification and assignment; basic assignment rules; email or chat escalation; spreadsheets or manual tracking. These can be time-consuming and inconsistent.
2. JOBS-TO-BE-DONE / PROBLEMS J&P Automatically identify the appropriate ticket category and route the ticket to the correct assignment group. Reduce repetitive manual classification and speed up ticket handling.	9. PROBLEM ROOT CAUSE RC Tickets have different descriptions and require agents to interpret the issue, select a category and assignment group, and update fields manually. Higher volume creates delays and inconsistent classification.	7. BEHAVIOUR BE Users submit incidents/service requests through ServiceNow. Agents review the ticket, identify the issue type, choose the category and assignment group, then process or escalate it.
3. TRIGGERS TR A new ticket is created or updated and requires categorization, assignment, or routing.	10. YOUR SOLUTION SL Auto Ticket Classification using ServiceNow Flow Designer. A Flow is triggered when a ticket is created or updated, evaluates defined conditions, automatically sets relevant classification and assignment fields, and routes the ticket to the appropriate support team. This reduces repetitive work and improves consistency.	8.2 OFFLINE CH Support desk interactions, phone calls, internal team communication, and agent discussions that lead to tickets being created or updated.
4. EMOTIONS: BEFORE / AFTER EM BEFORE: delays, repetitive work, uncertainty. AFTER: faster routing, clear ownership, less manual effort, and more consistent handling.		8.1 ONLINE CH ServiceNow portal, employee self-service, incident/request forms, email or chat integrations that create tickets in ServiceNow.

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS Who is your customer? I.e. working parents of 0-5 y.o. kids	6. CUSTOMER CONSTRAINTS CC What constraints prevent your customers from taking action or limit their choices of solutions? I.e. spending power, budget, no cash, network connection, available devices.	5. AVAILABLE SOLUTIONS AS Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? I.e. pen and paper is an alternative to digital notetaking	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS J&P Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one, explore different sides.	9. PROBLEM ROOT CAUSE RC What is the real reason that this problem exists? What is the back story behind the need to do this job? I.e. customers have to do it because of the change in regulations.	7. BEHAVIOUR BE What does your customer do to address the problem and get the job done? I.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (I.e. Greenpeace)	
Identify strong TR & EM	3. TRIGGERS TR What triggers customers to act? I.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news.	10. YOUR SOLUTION SL If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour.	8. CHANNELS of BEHAVIOUR CH 8.1 ONLINE What kind of actions do customers take online? Extract online channels from #7	Extract online & offline CH of BE
	4. EMOTIONS: BEFORE / AFTER EM How do customers feel when they face a problem or a job and afterwards? I.e. lost, insecure → confident, in control - use it in your communication strategy & design.		8.2 OFFLINE What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development.
