

Project Design Phase
Proposed Solution

Date	01/10/2026
Team ID	SWTID-2026-2467
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Proposed Solution:

Project team shall fill the following information in the proposed solution template.

S.N o.	Parameter	Description
1	Problem Statement (Problem to be solved)	In ServiceNow, incoming incidents and service requests often need to be manually reviewed, classified, and assigned to the appropriate support group. This repetitive process can take time, create inconsistent categorization, and delay ticket routing. The project addresses the need for faster and more consistent ticket classification and assignment.
2	Idea / Solution description	The proposed solution uses ServiceNow Flow Designer to automate ticket classification and routing. When a ticket is created or updated, the Flow evaluates predefined conditions based on ticket information, sets the relevant classification fields, and routes the ticket to the appropriate assignment group. This reduces repetitive manual work and provides a consistent workflow for ticket handling.
3	Novelty / Uniqueness	The solution applies Flow Designer to automate the classification and assignment steps within the existing ServiceNow workflow. Instead of depending entirely on manual review for routine tickets, predefined business conditions can automatically determine the required category and assignment group, making the process more consistent and easier to maintain.
4	Social Impact / Customer Satisfaction	The solution can reduce repetitive work for Service Desk agents and improve the speed and consistency of ticket routing. Users can benefit from clearer ownership of their requests and faster movement of tickets to the relevant support team. It can also help support teams spend more time on issue resolution rather than routine classification.
5	Business Model (Revenue Model)	For an organization, the solution can be implemented as part of a ServiceNow automation or workflow improvement project. The business value comes from reducing manual effort, improving operational efficiency, and supporting faster ticket processing. It can be offered as an internal automation solution or as part of ServiceNow implementation and consulting services.
6	Scalability of the Solution	The solution can be extended by adding more classification conditions, ticket categories, assignment groups, and routing rules as organizational requirements grow. The same Flow Designer approach can be adapted to different departments, services, and ticket types, allowing the automation to scale with increasing ticket volume and changing business processes.
