

Project Development Phase

Model Performance Test

Date	01/10/26
Team ID	SWTID-2026-2467
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	

Performance Testing:

The supplied reference is a Power BI performance-test template. The current project is implemented in ServiceNow using Flow Designer, so the same six-row structure is retained while each item is mapped to the corresponding ServiceNow development evidence. Power BI-specific DAX, dashboard and report measures are not used in this project.

S.No.	Parameter	Screenshot / Values
1	Data Rendered	Incident Workflow ticket form and its configured fields are rendered in the ServiceNow application, including Number, Caller, Category, Subcategory, Short Description, Description, State, Assigned Group and Assigned to.  Correct screenshot: Incident Workflow form
2	Data Preprocessing	ServiceNow ticket data is prepared through the Incident Workflow table/form configuration. Category and Subcategory are configured for the classification process, with Subcategory dependent on Category.  Correct screenshot: Subcategory dependent-field configuration
3	Utilization of Data Filters	Flow Designer uses conditional filtering/branching on ticket information. The Auto Classify School IT Tickets flow checks the created record and applies classification conditions such as Wi-Fi/Network, Projector/Hardware, Forgot Password/Access and Performance.  Correct screenshot: Flow Designer conditions
4	DAX Queries Used	DAX is not used because this is not a Power BI implementation. The corresponding ServiceNow logic is implemented through Flow Designer conditions and Update Record actions.  Correct screenshot: Flow Designer classification logic
5	Dashboard Design	A Power BI dashboard is not part of this ServiceNow project. The functional output is the classified Incident Workflow record and its configured fields/actions.

		 Supporting screenshot: Incident Workflow form
6	Report Design	A Power BI report is not part of this ServiceNow project. The project output is represented through the ServiceNow Incident Workflow form and automated classification flow.  Supporting screenshot: Flow Designer automation
