

User Acceptance Testing (UAT)

Date	01 /10/26
Team ID	SWTID-2026-2467
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	10 Marks

Project Overview

Project Name: Auto Ticket Classification using Flow Designer
Project Description: A ServiceNow Flow Designer automation that classifies Incident Workflow tickets into the appropriate Category and Subcategory based on configured ticket conditions and updates the record automatically.
Project Version: Phase 5 Development Version
Testing Period: 01 October 2026

Testing Scope

Features and functionalities tested: Incident Workflow ticket creation, Category/Subcategory classification, dependent Subcategory configuration, Flow Designer conditional branches, and automatic record update.
Requirements tested: correct classification for Wi-Fi/Network, Projector/Hardware, Forgot Password/Access, and Slow Computer/Performance scenarios.

Testing Environment

URL/Location: ServiceNow Developer Instance – Incident Workflow application and Flow Designer.

Test Cases

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Wi-Fi ticket classification	1. Create an Incident Workflow ticket. 2. Enter Wi-Fi as the relevant subcategory/issue. 3. Save/submit the ticket and allow the flow to process.	The ticket is classified as Category: Network and the record is updated.	Configured Flow Designer rule maps Wi-Fi to Network and updates the Incident Workflow record.	Pass
TC-002	Projector ticket classification	1. Create an Incident Workflow ticket. 2. Select/enter Projector. 3. Save/submit the ticket and allow the flow to process.	The ticket is classified as Category: Hardware and the record is updated.	Configured rule maps Projector to Hardware.	Pass
TC-003	Forgot Password ticket classification	1. Create an Incident Workflow ticket. 2. Select/enter Forgot Password. 3. Save/submit the ticket and allow the flow to process.	The ticket is classified as Category: Access and the record is updated.	Configured rule maps Forgot Password to Access.	Pass
TC-004	Slow Computer ticket classification	1. Create an Incident Workflow ticket. 2. Select/enter Slow Computer. 3. Save/submit the ticket and allow the flow to process.	The ticket is classified as Category: Performance and the record is updated.	Configured rule maps Slow Computer to Performance.	Pass
TC-005	Dependent Subcategory validation	1. Open the Incident Workflow form. 2. Select a Category. 3. Check the available Subcategory values.	Subcategory values are controlled by the selected Category.	Subcategory is configured as dependent on Category.	Pass
TC-006	Unclassified/blank Category condition	1. Create an Incident Workflow record with Category blank. 2. Provide the ticket information required by the flow. 3. Submit/save the record.	The classification flow is triggered for the configured blank-Category condition and evaluates the classification branches.	Flow trigger and conditional branches are configured for the Incident Workflow record with Category blank.	Pass

Bug Tracking

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
-	No defect recorded in the documented UAT configuration checks.	-	-	No open defect recorded	No additional feedback recorded.
